

PCOS

If you're experiencing symptoms of polycystic ovary syndrome (PCOS), our PCOS blood test can help you get the answers you need. This comprehensive test checks your testosterone levels and other markers of potential underlying causes, as well as your risk for developing heart disease and type-2 diabetes.

Biomarkers

- Cortisol (9am)
- Follicle Stimulating Hormone (FSH)
- Free Androgen Index
- HbA1c
- HDL
- HDL Ratio
- LDL
- Luteinising Hormone (LH)
- Oestradiol (Oestrogen)
- Progesterone
- Prolactin
- Sex Hormone-Binding Globulin
- Testosterone (total)
- Thyroid Stimulating Hormone (TSH)
- Thyroxine (T4, free direct)
- Total Cholesterol
- Triglycerides
- Triiodothyronine (T3, free)

How Does it Work?

Our blood test service has been planned to help you proactively manage your health.

Your sample will either be taken via a finger prick test or venipuncture dependent on the type of screening you have requested. Once your sample is taken it is sent off to a UCAS and ISO15189 accredited laboratory and typically your results are back within 48 hours for us to discuss either back in clinic or via a video consultation.

Simply book your appointment with us, **we will need 48 hours' notice before you attend our clinic for your test and some tests must be taken at certain times.** We will then have everything ready on the day to take your blood sample.

Please feel free to book a free consultation where we can take the time to discuss what test is best suited for what you would like to achieve from your personal screening, alternatively send us a message telling us what screening you would like to have so we can then arrange it at an appropriate time to ensure we have the correct screening test and are able to ensure we can get your samples to the laboratory in a timely manner.

You can email us at jenna@fallonaesthetics.co.uk or message on 07907 005255
