

CYCLIST

You've spent time and money ensuring your bike and kit work optimally, but your body is the most important part of your performance.

In cycling, the body is the motor. If you're looking for gains, it makes sense to give it the same attention you give your kit.

This test not only provides a snapshot of how your body is working but also gives you the information to better understand what it needs. The more you know about your body's strengths and needs, the better you can tailor your training and nutrition to keep it working it's best.

We want to ensure athletes like you are able to train sustainably, reaching your potential without compromising your health now or in the future. To do that, scientific knowledge is key.

Biomarkers

- Active B12
- Cortisol (9am)
- Creatine Kinase
- Creatinine
- eGFR
- Ferritin
- Haemoglobin
- hs-CRP
- Luteinising Hormone (LH)
- Prolactin
- Red Blood Cell Count (RBC)
- Testosterone (total)
- Thyroid Stimulating Hormone (TSH)
- Thyroxine (T4, free direct)
- Triiodothyronine (T3, free)
- Urea
- Vitamin D (25 OH)
- White Blood Cell Count (WBC)

How Does it Work?

Our blood test service has been planned to help you proactively manage your health.

Your sample will either be taken via a finger prick test or venipuncture dependent on the type of screening you have requested. Once your sample is taken it is sent off to a UCAS and ISO15189 accredited laboratory and typically your results are back within 48 hours for us to discuss either back in clinic or via a video consultation.

Simply book your appointment with us, **we will need 48 hours' notice before you attend our clinic for your test and some tests must be taken at certain times.** We will then have everything ready on the day to take your blood sample.

Please feel free to book a free consultation where we can take the time to discuss what test is best suited for what you would like to achieve from your personal screening, alternatively send us a message telling us what screening you would like to have so we can then arrange it at an appropriate time to ensure we have the correct screening test and are able to ensure we can get your samples to the laboratory in a timely manner.

You can email us at jenna@fallonaesthetics.co.uk or message on 07907 005255
